

AKASH BHADANA

DevOps Engineer | Cloud Infrastructure | CI/CD | SRE

+91 92058 20083 • Akashbhadana3yx@yahoo.com • [linkedin.com/in/akashbhadana](https://www.linkedin.com/in/akashbhadana) • github.com/AkashBhadana • Faridabad, Delhi NCR • Immediate Joiner • Last Working Day: June 10, 2026 | Open to Relocation

PROFESSIONAL SUMMARY

DevOps Engineer with ~2+ years managing multi-tenant Azure/AWS production infrastructure — 50K active users, 450K+ monthly requests, 99.999% SLA. Delivered automation, incident response, DR failover, and compliance for enterprise clients including State Bank of India, L&T, AU Small Finance Bank, KreditBee, and Policybazaar. Skilled in Kubernetes, Terraform, Jenkins, GitHub Actions, and cloud security.

TECHNICAL SKILLS

Cloud: Azure (AKS, VMSS, ACR, Monitor, Log Analytics, Entra ID, Redis, MySQL Flexible Server, VNet, NSG, Blob) | AWS (EC2, S3, VPC, IAM, CloudFormation)

DevOps & IaC: Jenkins | GitHub Actions | ArgoCD | GitOps | Terraform | Ansible | Docker | Kubernetes | Helm | Firebase App Distribution

Observability: Azure Monitor | OneUptime | Prometheus | Grafana | Log Analytics

Security: TLSv1.2/1.3 | NSG hardening | IAM least-privilege | SOC2 | Azure CSPM | IP whitelisting

Scripting & Infra: Bash | Groovy | YAML | Python | NGINX | MySQL | PostgreSQL | Redis | Linux (RHEL/Ubuntu/Debian)

PROFESSIONAL EXPERIENCE

DevOps Engineer | **Competent Groove** | Mohali, Punjab Sep 2024 – Present

- Engineered VMSS production cluster — 3 nodes, NGINX + Node.js + PM2 — serving 50K active users and 450K+ monthly requests across 8+ enterprise clients (SBI, L&T, MGL, Shriram Finance, KreditBee, Policybazaar, AU Small Finance Bank). Configured CPU autoscaling at 90% threshold. Maintained 99.999% production SLA.
- Built 17+ Jenkins pipelines (10 dev, 4 UAT, 3 prod) — GitHub webhook → Ansible playbook → SSH deploy → Google Chat notification. Automated Angular + Node.js build/deploy workflows. Configured GitHub Actions for Android/iOS CI with Firebase App Distribution to Google Play Store. Reduced manual deployment effort 60%.
- Authored reusable Terraform modules for Azure + AWS infrastructure provisioning (VMs, VPCs, IAM, NSGs, storage). Maintained 12+ Ansible playbooks across dev/UAT/prod. Automated nightly log aggregation + weekly S3 archival via Bash + cron. Eliminated configuration drift and manual log management entirely.
- Built full observability stack — OneUptime (1-min server checks, 5-min website checks) + Azure Monitor alerts across 12+ services (VMSS, VM, Redis, AKS, ACR, Blob, DNS, NSG). Reduced MTTR by 70%. Hardened security: TLSv1.2/1.3, SSH IP whitelisting, NSG rules, Azure Entra ID + AWS IAM least-privilege. Generated SOC2 + Azure CSPM reports for banking clients.
- Resolved P0 multi-tenant outage — isolated L&T geo-location traffic spike by provisioning dedicated Azure VM, segregating DNS routing within 10 days. Zero data loss across 8+ client environments.
- Debugged SBI Sampark production freeze (6 app + 3 web servers). Root cause: exhausted MySQL connection pool on on-premises server (no auto-cleanup). Fixed via MySQL library upgrade + application-level connection timeout. Permanent resolution after thorough investigation.
- Executed full DC→DR failover for AU Small Finance Bank — migrated 2 app servers, 2 web servers, Redis, scheduler, MySQL from Mumbai to Bangalore on-premises. Configured NGINX round-robin + PM2 stack from scratch. Zero-data-loss cutover. Implemented DB encryption for SBI Mumbai under 1-week compliance deadline.
- Deployed AKS + ArgoCD GitOps proof-of-concept, leading VMSS→AKS production migration planning. Implemented Azure cost governance (reserved instances, right-sizing, cleanup) — reduced monthly spend 16%. Leveraged Azure MCP AI agent for cost diagnostics.

IT Administrator | CRB Industry Pvt. Ltd. | Faridabad Apr 2023 – Aug 2024

- Managed IT infrastructure for 20+ endpoints — hardware provisioning, OS patching, network security policies, access controls, monthly audits. Enforced data protection compliance and maintained 100% operational uptime.

PROJECTS

► ArgoCD GitOps Demo github.com/AkashBhadana/argocd-Gitops-demo

- Implemented GitOps workflow using ArgoCD + Kubernetes. Git-driven declarative manifests auto-sync NGINX deployments. Configured continuous drift detection and auto-remediation. Stack: Kubernetes, ArgoCD, NGINX, Helm manifests.

► Airflow Stack with Keycloak SSO github.com/AkashBhadana/Airflow-Stack

- Dockerized Apache Airflow with enterprise Keycloak SSO authentication + PostgreSQL metadata backend. Automated full stack setup via Bash scripts. Docker Compose orchestration. Stack: Airflow, Keycloak, PostgreSQL, Docker, Bash.

CERTIFICATIONS & LEARNING

- AZ-104: Microsoft Azure Administrator — Exam target: July 2026
- CKA: Certified Kubernetes Administrator — Exam target: Q4 2026

EDUCATION

Bachelor of Computer Applications (BCA) | D.A.V. College, MDU University, Faridabad | 2019
